AML Software Selection

Anti-Money Laundering (AML) software plays an important role in any effective AML strategy. AML Australia, supported by its vast network of AML software and solution providers, offers dedicated assistance in opting for multi-functional, scalable, and cost-effective solutions that align with the reporting entity's AML/CTF compliance requirements.

AML Australia's Rigorous Approach to Software Selection

1. Defining Reporting Entity's Software Requirements

Determining what are the gaps in the AML compliance process that the entity seeks to fill or functions it seeks to supplement

2. Recording the Entity's Requirements

Listing down the features that the entity wishes to have and the must-haves in a software

3. Searching Vendors

Looking for vendors offering software solutions that can match the reporting entity's requirements and budget

4. Arranging Software Demo

Verifying the solutions offered by vendors with practical demo sessions to see if they align with the reporting entity's existing workflow and software requirements

5. Assistance in Decision Making

AML Australia helps reporting entities arrive at a decision in choosing the best software for their needs on the basis of its research conclusions that can be of value for the entity's investments

6. Negotiation and Agreements

AML Australia helps reporting entities choose the best software for their needs and the one that creates correct value for the entity's investment
